TITLE: Method for improving sorption properties in  
cellulose fibres - involves  
fibres being treated with water-soluble, non-ionic polymer  
having average  
molecular weight of at least approximately 3000

INVENTOR: ANKARBRATT, L; MALMBORG, K ; THEBRIN, I ; WAHLEN,  
S

PATENT-ASSIGNEE: EKA CHEM AB[EKAA]

PRIORITY-DATA: 1997SE-0000025 (January 8, 1997)

ABSTRACTED-PUB-NO: SE 9700025A

BASIC-ABSTRACT: The treated fibres are natural cellulose  
fibres. The polymers  
are selected from a group which comprises polyethylene  
glycols, polypropylene

glycols, polypropylene  
glycols, polyethylene oxide, polytetrahydrofuran, or  
alkoxylated derivs.,  
polyvinylpyrrolidone or halogen hydroxylated,  
ethylhydroxylated or hydropropyl  
derivs., polyvinyl alcohol, hydroxypropyl starch,  
ethylhydroxyethylcellulose,  
etc.. The solution of polymer containing water is sprayed  
onto the fibres or  
the fibres can be suspended in a solution containing water  
during treatment.  
The absorbent material containing cellulose fibres can be  
fluff, hygiene paper,  
paper impregnated with heat-hardening resin, the paper  
being used as an overlay  
in a decorative laminate.

USE - To improve the sorption properties in cellulose  
fibres.

ADVANTAGE - The method works with already existing natural  
and regenerated  
cellulose fibres and does not involve the use of noxious  
substances.
